## TRACTION & CONTROL

# RIP WITH AN IRON GRIP

Whether you're replacing your carbides or looking to add more traction and control for enhanced performance, premium Woody's® stud kits and carbide runners are exclusively engineered for your Polaris snowmobile.

## CONTROL FOR HOW YOU RIDE

### TUNNEL PROTECTION

Required protection for when you stud, these "wear strips" protect your tunnel and vital cooling components from damage.

### CARBIDES

Replacing or upgrading, add the right amount of ski control to match your track length, studding pattern and riding style.

### STUDS

Choose the right length stud for your track lug and then select a pattern to best suit your riding style for a touch of added control to monster holeshots.

### CARBIDE WEAR STRIPS

Carbides need to be sharpened or replaced periodically due to normal wear and use. Rocks, cement, pavement and road crossings all contribute to carbide wear.

**3"-4" CARBIDE**

Perfect for sleds with a 121" track with 96 studs or less or sleds with 1" lugs taking corners at moderate speeds

**6" CARBIDE**

Ideal for sleds in the 136" track range with up to 1 1/4" lugs or shorter track sleds with more than 96 studs

**8" CARBIDE**

Best for ultimate-performance sleds with a 144" track or longer with paddles and/or the maximum amount of studs

### SINGLE RUNNER

Provides known reliability, handling and control.

# FOUR KEYS TO TRACK SELECTION

## LENGTH

The inside circumference of the track is calculated as the drive pitch multiplied by the number of track segments. It must be correct to the nearest inch for proper fit without additional modifications to the skid frame.

## DRIVE PITCH

The drive cog center distance around the circumference of the cogs on the drive axle. It must match the existing track or the drive cogs must be changed.

## WIDTH

The measurement across the track governed by the width of the tunnel.

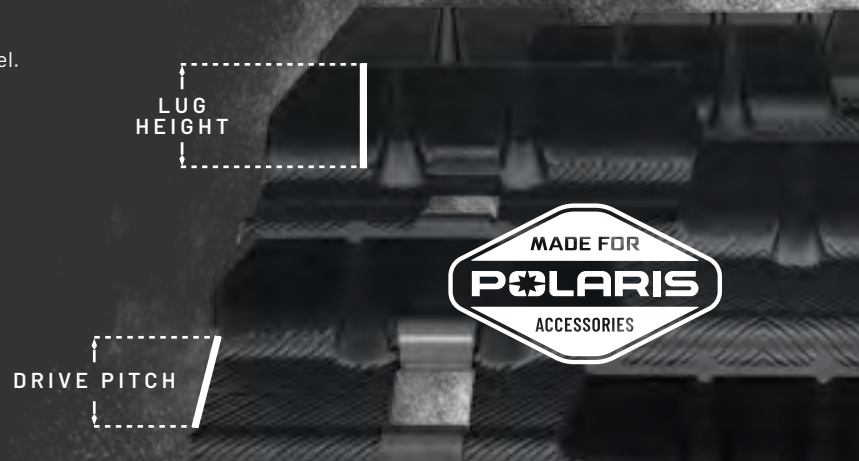

## LUG HEIGHT

The distance lugs extend above the track surface.

- Trail: 1" - <1.5"
- On/Off Trail: 1.5" - <2"
- Deep Snow: 2" and greater

## OIL DEVELOPMENT

POLARIS INVESTS IN EACH OIL AT AND ABOVE THESE LEVELS.

## KEY POINTS OF PROTECTION

### PISTON

Pistons play a critical role in engine operation and the wrong oil can lead to power loss, scuffing and poor performance.

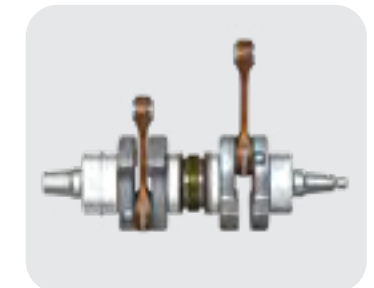

- Maximizes power output while providing excellent film retention to prevent scuffing
- Superior stability in high temperatures, while minimizing carbon deposits and increasing long term reliability
- Oil flows at low temperatures to prevent hard starting

### CRANKSHAFT BEARING

Provides hydrodynamic barrier on bearing interfaces to extend upper and lower rod bearing life.

- Provides accurate oiling under extreme cold conditions
- Excellent film retention and heat transfer properties
- Corrosion inhibitors protect during off-season storage

### EXHAUST VALVE OPERATION

Exhaust valves control power output during on and off throttle use. Improper lubricants can cause carbon buildup and sticking of valves, reducing power.

- Provides detergency over the life of the exhaust valves
- Minimizes carbon buildup to ensure exhaust valves continue to move freely and keep the engine running at peak power
- Designed to provide smooth valve operation throughout the life of the engine

\*Belt dimensions are given in nominal dimensions. There is a +/- variance for all critical dimensions. Clutch setup must be inspected when a new belt is installed and should be adjusted if necessary. The drive belt is an important component in the CVT system. In order to achieve maximum efficiency from the converter, drive-belt deflection (tension), clutch offset and alignment must be adjusted properly. See your service manual for further details on drive-belt measurement inspection.

# TECH54

## TECHNOLOGY TO OWN THE EXTREMES

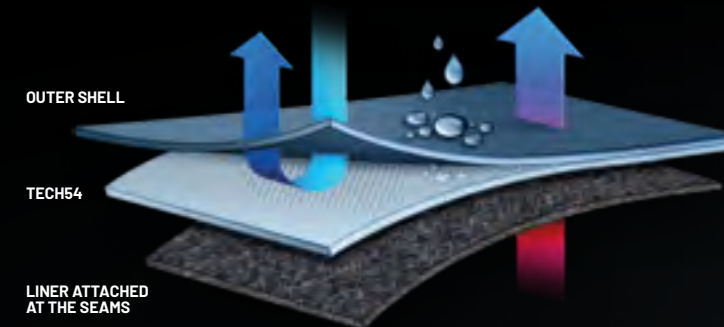

STAY WARM AND DRY IN RIDING GEAR WITH TECH 54.

Our Apparel Center of Excellence developed TECH54—a waterproof, breathable membrane featured in every Polaris jacket, bib and monosuit. This exclusive technology allows perspiration to escape and keeps water out, so no matter how you ride, or where you ride, you stay dry, warm and comfortable.

### WATERPROOF/BREATHABLE

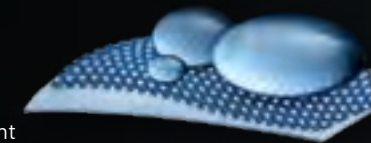

TECH54 is our single-layer bonded laminate technology that brings waterproof breathability and riding comfort to a new level in every Polaris jacket and bib.

### DWR

#### RESIST MOISTURE

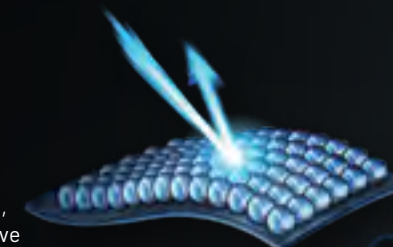

Every Polaris jacket and bib is treated with a DWR (Durable Water Repellent) coating to prevent precipitation from saturating the outer fabric, so your gear doesn't get soggy. The DWR coating causes water to bead up and run off, keeping you comfortable and dry.

### 3M Scotchlite™ Reflective Material

#### RIDE SAFER

Proven in every weather condition, patented 3M® Scotchlite® Reflective Material is placed meticulously on each garment and nighttime tested to provide visibility from every angle.

### YKK ZIPPERS

#### STAY PROTECTED

Quality construction you can trust.

### 3M Thinsulate™ INSULATION

#### BE WARMER

3M® Thinsulate® Insulation is zonally mapped on insulated apparel to provide extra insulation in high wind exposure areas.

### HOW IT WORKS TO ELEVATE YOUR RIDE.

5k/5k, 10k/10k OR 20k/20k

#### WATERPROOF

The first number (5k, 10k or 20k) refers to the waterproof rating.

#### BREATHABILITY

The second number (5k, 10k or 20k) refers to how much water vapor the material can expel through the outerwear to release heat—and keep you dry from the inside.

#### DIFFERENT RATINGS FOR DIFFERENT RIDES

Choose your TECH54 rating based on the weather conditions and your level of exertion.

**5k/5k:** best for colder and drier snow conditions and moderate activity.

**10k/10k:** best for wet snow conditions and high-activity riding.

**20k/20k:** best for extremely wet snow conditions and the most aggressive riding.
