# FOR THE LIFE OF YOUR RIDE

#### MAINTENANCE TIP

#### **BREAK-IN PERIOD**

The break-in period for your new RZR is the first 25 hours of operation, 1 month, or the time it takes to use the first two tanks of fuel (whichever comes first). No single action on your part is as important as a proper break-in period. Careful treatment of a new engine will result in more efficient performance and longer life for the engine.

SEE OUR LATEST MAINTENANCE TIPS AT RZR.POLARIS.COM/EN-US/SELF-HELP

#### **AIR FILTER**

A clogged air filter can restrict air flow to the engine leading to reduced engine performance, engine life or catastrophic failure.

#### **BRAKE PADS**

Maintaining and/or replacing brakes are critical to the safety and functionally of a vehicle. Brake pads should be checked for wear and oil or grease (petroleum products) contamination and brake discs should be checked for cracks, excessive corrosion or warping.

#### **HALF SHAFT**

Check for tears and punctures in the boot, which can lead to CV joint wear that can contribute to axle failure.

**BATTERY** 

To ensure a battery maintains its level of charge when unused for extended periods of time or during freezing weather, the battery should be connected to a NOCO® Battery Charger (see P. 101). Be sure to check for corrosion from the terminals to the ends of the cables.

#### **DRIVE BELT**

PARTS THAT PUSH THE

**LIMITS WITHOUT SACRIFICING** STRENGTH AND DURABILITY.

We build our products so anyone with the

right tools can maintain their vehicle.

Polaris Engineered belts deliver unmatched performance for your off-road vehicle. Developed and tested on all our engines for all environments and conditions. Check your belt for delamination, hour glassing and glazing.

#### BREAK-IN PERIOD

- Use lower gear (if available) while varying speeds and avoid wide open throttle for 5-10 miles / 8-16 km
- If no low gear is available, vary at moderate speeds while avoiding wide open throttle for 50 miles / 80 km

#### **OUR INVESTMENT**

- · 40,000+ miles / 64,000+ km of field testing
- Thousands of dyno hours
- 18+ months of development (13,000+ design hours) per belt
- 1,500+ vehicle validation hours
- · Collaboration with powertrain and clutch engineers

#### YOUR ADVANTAGE

- · No clutch recalibration
- · Less wear and tear due to heat
- Ensure maximum vehicle performance
- More time riding, less time wrenching
- · Produced in collaboration with powertrain and clutch engineers to ensure a perfect fit, maximum performance and ultimate durability

#### **OIL FILTER**

Change oil filters with every oil change to provide the best engine protection and keep the engine operating at peak performance.

TIRE SEALANT

#### **HOW IT WORKS**

Tire sealant remains liquefied inside the tire until a leak develops in the tire or wheel.

Once a leak occurs, the tire sealant rushes out of the tire and quickly creates a permanent solid plug.

The plug maintains the pressure of the tire so you can continue your ride.
