TECH54

TECHNOLOGY TO CONQUER THE RIDE

ELEVATE YOUR RIDE WITH EXCLUSIVE TECH54 RIDING GEAR DESIGNED TO KEEP YOU WARM AND DRY.

Our Apparel Center of Excellence developed TECH54—a waterproof, breathable membrane featured in every Polaris jacket, bib and monosuit. This exclusive technology allows perspiration to escape and keeps water out, so no matter how you ride, or where you ride, you stay dry, warm and comfortable.

WATERPROOF/BREATHABLE

TECH54 is our single-layer bonded laminate technology that brings waterproof breathability and riding comfort to a new level in every Polaris jacket and bib.

DWR

RESIST MOISTURE

Every Polaris jacket and bib is treated with a DWR (Durable Water Repellent) coating to prevent precipitation from saturating the outer fabric, so your gear doesn't get soggy. The DWR coating causes water to bead up and run off, keeping you comfortable and dry.

3M Scotchlite[™] Reflective Material

RIDE SAFER

Proven in every weather condition, patented 3M[®] Scotchlite[®] Reflective Material is placed meticulously on each garment and nighttime tested to provide visibility from every angle.

YKK[®] ZIPPERS

STAY PROTECTED

Quality construction you can trust.

3M Thinsulate[®] INSULATION

BE WARMER

3M[®] Thinsulate[®] Insulation is zonally mapped on insulated apparel to provide extra insulation in high wind exposure areas.

HOW IT WORKS TO ELEVATE YOUR RIDE.

5k/5k, 10k/10k OR 20k/20k

WATERPROOF

The first number (5k, 10k or 20k) refers to the waterproof rating.

BREATHABILITY

The second number (5k, 10k or 20k) refers to how much water vapor the material can expel through the outerwear to release heat—and keep you dry from the inside.

DIFFERENT RATINGS FOR DIFFERENT RIDES

Choose your TECH54 rating based on the weather conditions and your level of exertion.

5k/5k: best for colder and drier conditions and moderate activity

10k/10k: best for wet riding conditions and high-activity riding

20k/20k: best for extremely wet riding conditions and the most aggressive riding

FOUR KEYS TO TRACK SELECTION

LENGTH

The inside circumference of the track is calculated as the drive pitch multiplied by the number of track segments. It must be correct to the nearest inch for proper fit without additional modifications to the skid frame.

DRIVE PITCH

The drive cog center distance around the circumference of the cogs on the drive axle. It must match the existing track or the drive cogs must be changed.

WIDTH

The measurement across the track governed by the width of the tunnel.

LUG HEIGHT

The distance lugs extend above the track surface.

- Trail: 1" - <1.5"
- On/Off Trail: 1.5" - <2"
- Deep Snow: 2" and greater

KEY POINTS OF PROTECTION

PISTON

Pistons play a critical role in engine operation and the wrong oil can lead to power loss, scuffing and poor performance.

- Maximizes power output while providing excellent film retention to prevent scuffing
- Superior stability in high temperatures, while minimizing carbon deposits and increasing long term reliability
- Oil flows at low temperatures to prevent hard starting

CRANKSHAFT BEARING

Provides hydrodynamic barrier on bearing interfaces to extend upper and lower rod bearing life.

- Provides accurate oiling under extreme cold conditions
- Excellent film retention and heat transfer properties
- Corrosion inhibitors protect during off-season storage

EXHAUST VALVE OPERATION

Exhaust valves control power output during on and off throttle use. Improper lubricants can cause carbon buildup and sticking of valves, reducing power.

- Provides detergency over the life of the exhaust valves
- Minimizes carbon buildup to ensure exhaust valves continue to move freely and keep the engine running at peak power
- Designed to provide smooth valve operation throughout the life of the engine

*Belt dimensions are given in nominal dimensions. There is a +/- variance for all critical dimensions. Clutch setup must be inspected when a new belt is installed and should be adjusted if necessary. The drive belt is an important component in the CVT system. In order to achieve maximum efficiency from the converter, drive-belt deflection (tension), clutch offset and alignment must be adjusted properly. See your service manual for further details on drive-belt measurement inspection.
